

Relatório Lab 9 - CT213

Código: A implementação da YOLO foi bem direta, apenas seguindo a arquitetura dada no roteiro e usando o número de filtros corretos (P.G. de razão 2). O processamento da imagem foi a parte mais tricky, além das orientações do roteiro, utilizei a função unravel index da biblioteca numpy para achar o máximo valor em determinada dimensão do array 3d.

Resultados: A rede consegue detectar muito bem a bola e as traves, mesmo em imagens tremidas/borradadas.

Arquitetura da YOLO Implementada

Layer (type)	Output Shape	Param #	Connected to
input_1 (InputLayer)	(None, 120, 160, 3)	0	
conv_1 (Conv2D)	(None, 120, 160, 8)	216	input_1[0][0]
norm_1 (BatchNormalization)	(None, 120, 160, 8)	32	conv_1[0][0]
leaky_relu_1 (LeakyReLU)	(None, 120, 160, 8)	0	norm_1[0][0]
conv_2 (Conv2D)	(None, 120, 160, 8)	576	leaky_relu_1[0][0]
norm_2 (BatchNormalization)	(None, 120, 160, 8)	32	conv_2[0][0]
leaky_relu_2 (LeakyReLU)	(None, 120, 160, 8)	0	norm_2[0][0]
conv_3 (Conv2D)	(None, 120, 160, 16)	1152	leaky_relu_2[0][0]
norm_3 (BatchNormalization)	(None, 120, 160, 16)	64	conv_3[0][0]
leaky_relu_3 (LeakyReLU)	(None, 120, 160, 16)	0	norm_3[0][0]
max_pool_3 (MaxPooling2D)	(None, 60, 80, 16)	0	leaky_relu_3[0][0]
conv_4 (Conv2D)	(None, 60, 80, 32)	4608	max_pool_3[0][0]
norm_4 (BatchNormalization)	(None, 60, 80, 32)	128	conv_4[0][0]
leaky_relu_4 (LeakyReLU)	(None, 60, 80, 32)	0	norm_4[0][0]
max_pool_4 (MaxPooling2D)	(None, 30, 40, 32)	0	leaky_relu_4[0][0]
conv_5 (Conv2D)	(None, 30, 40, 64)	18432	max_pool_4[0][0]
norm_5 (BatchNormalization)	(None, 30, 40, 64)	256	conv_5[0][0]
leaky_relu_5 (LeakyReLU)	(None, 30, 40, 64)	0	norm_5[0][0]
